THE LINGUISTIC SURVEY OF INDIA

AND THE

CENSUS OF 1911.

THE following pages show the statistical results of the Linguistic Survey of India, compared, so far as is possible, with the language-figures of the Census of 1911.

The Survey figures in this list are for the most part based upon the figures of the Census of 1891. It will be seen that, allowing for the necessary adjustments and for the growth of the population in the intervening twenty years, the totals for the various languages agree remarkably with those of 1911. The reasons for the adoption of the Census of 1891 as a basis for the Survey are as follows. Generally speaking, except when special reasons suggest a contrary course, the linguistic tables of the Indian census deal only with languages. They are not concerned with dialects. On the other hand, for the purposes of a linguistic survey, an exhaustive conspectus of all dialects of the languages dealt with forms a necessary part of its operations. Lists of dialects were therefore obtained from the various local areas covered by the Survey. They were furnished by the officials in charge of these areas in 1896 and the following years. Each local official had at hand the language-totals of his District or State according to the Census of 1891. With the aid of his local knowledge, and as the result of local inquiries, he was able to state what dialects of each language were spoken in his charge,

and how many speakers there were of each. The total for the dialects of each language had, of course, to agree with the then existing figures for the language under which they were grouped, and the figures for the dialects were in this way indirectly based upon the Census of 1891. It took nearly three years to correct and arrange the figures so obtained, and it would be a work of too great labour to do it all over again on the basis of a later Census. Only in the case of a few languages, principally those of the North-West Frontier, was it possible, for special reasons, to utilize the figures of the Census of 1911.

The 1911 Census figures, as here recorded, deal with a population of 312,948,881 people. The Survey figures deal only with 290,070,700. The difference is due to the fact that the Census covered the whole of India, while large areas were excluded from the operations of the Survey. For instance, the latter took no cognizance of the twelve million inhabitants of the Province of Burma.¹ There is also the growth of the population of India to be taken into account. In 1891 that population was 287 millions,² and in 1911 it was 315 millions.

In the following tables there are entries of 872 different languages and dialects. In this enumeration there is a good deal of double counting, as each language, and each dialect is given a separate number. A better idea of the results will be gained from the consideration that the Census of 1911 records 170, and the Survey records 179

¹ A Linguistic Survey of Burma, on the lines of the present Survey, has lately been commenced.

² The Survey figures amount to a total of 290 millions. The excess over the 287 millions of 1891 is due to the fact that, especially on the North-Western Frontier, the Survey covers an area considerably larger than that subjected to the Census. For the excess areas, the figures of the 1911 Census have, when possible, been utilized.

languages, as distinct from dialects. When counting dialects, it must be borne in mind that, in order to make the total for the dialects tally with the number of speakers of the language of which they form the members, it has been necessary to count the standard form of the language as one of the dialects. There are also, inevitably, cases in which a language has been returned, but its dialects not mentioned. For instance, the Khasi language (No. 8 in the list) and its dialects are arranged as follows :—

Khasi.
Standard.
Lyng-ngam.
Synteng.
Wār.
Unspecified.

Here, if we count Khasi in the list of languages, we must omit 'Standard' and 'Unspecified' from our list of dialects, or we shall be recording the same form of speech twice, or perhaps three times, over. Hence, in the above example, we can count only three dialects as additional to the standard Khasi language. On this principle, the Census has recorded 68 dialects in addition to the general language-names. The Survey, on the other hand, has recorded no less than 544 dialect-names in addition to the standard and the unspecified forms of the 179 languages. The various forms of speech noted are therefore 238 (170+68) in the Census, and 723 (179+544) in the Survey. Each of these 723 is described in the Survey, in most cases with more or less complete grammatical accounts. A summary of the details¹ of these figures is as follows :—

¹ The full details will be found in Appendix I.

LINGUISTIC SURVEY AND THE CENSUS OF 1911.

	SURVEY FIGURES.		CENSUS FIGURES.	
	Languages.	Dialects.	Languages.	Dialects.
Indo-Nesian Languages	2	...
Austro-Asiatic Languages . .	7	14	13	10
<i>Mön-Khmër Branch</i> . . .	1	3	7	...
<i>Mundā Branch</i> . . .	6	11	6	10

<i>Assam-Burmese Branch</i> . .	76	51	76	5
Dravidian Languages . . .	16	23	15	...
Aryan Languages . . .	38	402	27	29
<i>Iranian Branch</i> . . .	8	35	5	...
<i>Dardic Branch</i> . . .	13	22	5	...
<i>Indo-Aryan Branch</i> . . .	17	345	17	29
Outer Sub-Branch . . .	7	110	7	3
Mediate Sub-Branch . . .	1	18	1	...
Inner Sub-Branch . . .	9	217	9	26
Unclassed Languages . . .	2	19	2	...
TOTAL .	179	544	170	68

It will be noticed that the Sub-Family that contains the greatest number of languages is the Tibeto-Burman. So far as the area covered by the Survey is concerned, the speakers of the languages of this Sub-Family all live in mountainous countries. As a rule, each tribe is separated from its neighbours, and languages thus quickly split up into dialects, and each dialect easily develops into a distinct language. In this way, while the number of languages is great, the number of speakers of each, averaging about 17,000, is small.

On the other hand, while there are only 17 Indo-Aryan languages, the number of their speakers is 226 millions, spread over the plains and hills of northern India. Here numbers, nationality, and habitat have combined to produce no less than 345 dialects in addition to the 17 standard languages. In this respect, the contrast between the Tibeto-Burman and the Aryan languages is marked. The monosyllabic Tibeto-Burman speech easily divides and sub-divides into numerous distinct and mutually unintelligible languages. If, as an example of similarly circumstanced Aryan forms of speech, we take the Eranian languages spoken in or near India and the Dardic languages, we find that these two branches, like the Tibeto-Burman languages, are spoken in inhospitable mountain tracts, but that they persist. If they do sub-divide, the division is not into mutually unintelligible languages, but into mutually intelligible dialects, held together by a common grammatical basis. Their synthetic character preserves each as a constant whole, and even in their rugged habitats they are only 21 in number spread over a tract extending from Kashmir to the Persian frontier and from the Pâmirs to the Arabian Sea. In northern India, where there are few hilly tracts to isolate the speakers, the Indo-Aryan languages are still less in number; and though the dialects are many, the relationship of each to one or other of the great parent languages is apparent to the most casual observer.

It has already been stated that the Survey deals with the languages spoken by about 290 millions of people, a number, roughly speaking, corresponding to three-quarters of the entire population of Europe. The following is a summary of the number of speakers for each linguistic Family :—

	NUMBER OF SPEAKERS.	
	According to the Linguistic Survey.	According to the Census of 1911.
Austrie Family	3,052,046	4,404,819
Tibeto-Chinese Family	1,984,512	12,972,512
Dravidian Family	53,073,261	62,718,961
Indo-European Family	231,874,403	232,822,511
Unclassed	101,585	80,078
TOTAL .	290,085,807	312,948,881

As already explained, the difference between the two totals is mainly due to the fact that the area covered by the Survey was not the same as that covered by the Census. A more detailed summary will be found in Appendix II, after the main tables. In the main tables themselves it will be noticed that many of the figures are given in round numbers. In such cases it is to be understood that the figures are estimates, and are not based on actual counting. These estimates were in every case made by officials with local experience, and may be received as trustworthy.

A few words must be added as to the classification of the languages mentioned in this list. For those which have been dealt with in the Linguistic Survey, I have followed the grouping there adopted. The only exception is Mikir (No. 189), which later information has caused me to transfer from the Nāgā-Bodo to the Nāgā-Kuki sub-group. As regards the other languages,—nearly all of which are spoken in Burma,—I have thought it best, for convenience of reference, to follow the classification of the Census of 1911, although that is not now altogether in accordance with the latest results of philological research. A Linguistic Survey of Burma is at the present moment in progress, and it seems to me to be advisable to defer any alteration of the Census arrangement until that Survey has put the attempt upon a secure foundation. Any immediate change could only be temporary and provisional. Where, however, the Census arrangement is to my knowledge certainly wrong, I have put a note to that effect in the column of Remarks.

GEORGE A. GRIERSON.

LINGUISTIC SURVEY AND THE CENSUS OF 1911.

Serial No.	Name of Language or Dialect.	NUMBER OF SPEAKERS.		REMARKS.
		Survey Estimates (1891).	According to Census, 1911.	
	Austrie Family	3,052,046	4,404,819	
	Austro-Nesian Sub-Family	6,179	
	Indo-Nesian Branch	6,179	None of the languages of this Branch came within the scope of the Survey.
	Malay Group	6,179	
1	Salón	1,871	
2	Malay	4,308	
	Austro-Asiatic Sub-Family	3,052,046	4,398,640	
	Mōn-Khmēr Branch	177,293	555,417	Except Khasi, none of the languages of this Branch came within the scope of the Survey.
	Mōn-Khmēr Group	179,444	
3	Mōn	179,444	
	Palaung-Wa Group	166,683	
4	Palaung	140,252	
5	Wa	16,511	
6	Yao	274	} The classification of these two languages, which is that of the Census, is incorrect. Their affiliation is not certain, but, under any circumstances, they do not belong to the Mōn-Khmēr Branch. Elsewhere, I have classed them as 'Map' languages. Here, for convenience of reference, I follow the Census.

		Survey Estimates (1891).	According to Census, 1911.	
	Tai Group	4,205	972,273	Mostly spoken in Burma.
44	Siamese	8,908	
45	Lü	13,262	
46	Khün	48,408	
47	Shān	200	899,271	
48	<i>Shān Proper</i>	898,832	
49	<i>Aiton</i>	200	412	Spoken in Assam.
50	<i>Kob</i>	27	Ditto.
51	Ahom	
52	Khāmti	4,005	2,424	Now extinct. Formerly spoken in Assam. It is described in the Survey.
53	<i>Khāmti Proper</i>	<i>2,930</i>	<i>2,063</i>	Spoken in Assam.
54	<i>Phākial</i>	625	361	
55	<i>Tairong</i>	150	...	
56	<i>Nora</i>	300	...	
	Tibeto-Burman Sub-Family	1,980,307	10,932,775	
	Tibeto-Himalayan Branch	399,742	439,552	Most of the speakers of these languages belong to Burma, which was not subject to the operations of the Survey.
	Tibetan Group	205,508	230,269	
57	Bhōtiā	205,508	230,269	
58	<i>Bhōtiā of Tibet or Tibetan</i>	7,968	6,020	

LINGUISTIC SURVEY AND THE CENSUS OF 1911.

Serial No.	Name of Language or Dialect.	NUMBER OF SPEAKERS.		REMARKS.
		Survey Estimates (1891).	According to Census, 1911.	
59	<i>Bhōṭiā of Baltistan or Balti</i>	130,678	132,199	} The Survey figures for these three dialects are those of the Census of 1901. No figures were available in 1891.
60	<i>Bhōṭiā of Purik</i>			
61	<i>Bhōṭiā of Ladakh or Ladakhi</i>			
62	<i>Bhōṭiā of Lahul or Lāhuli</i>	29,806	54,761	} From here the differences between the Survey figures and those of the Census of 1911 are due partly to the fact that the latter covered a larger area than did that of 1891, and partly to classification less stringent than that adopted in the Survey. In 1911, 11,429 speakers were not classified at all.
63	<i>Bhōṭiā of Spiti</i>	1,579	132	
64	<i>Bhōṭiā of Upper Kanawar or Nyamkat</i>	3,548	...	
65	<i>Bhōṭiā of Upper Kanawar or Nyamkat</i>	1,544	...	
66	<i>Bhōṭiā of Tekri Garhwal or Jaḍ</i>	106	...	
67	<i>Bhōṭiā of Garhwal</i>	4,300	...	
68	<i>Sharpa Bhōṭiā</i>	900	5,186	
69	<i>Bhōṭiā of Sikkim or Dā-njong-kū</i>	20,000	11,562	} Spoken in East Nepal and Darjiling, but no figures are available. Akin to Sharpa.
70	<i>Bhōṭiā of Bhutan or Lhoke</i>	5,079	3,680	
71	<i>Kagate</i>	11,429	
71	<i>Bhōṭiā of Khams</i>		
	<i>Other Dialects (Unspecified)</i>		
	Pronominalized Himalayan Group	93,978	115,211	
	<i>Western Sub-Group</i>	27,093	31,063	
72	<i>Manchāṭi or Paṭni</i>	2,995	4,797	
73	<i>Chamba Lāhuli</i>	1,387	1,173	
74	<i>Bunān</i>	2,987	1,261	
75	<i>Ranglōi, Gōndlā, or Tinan</i>		725

158	<i>Nāli or Mimā</i>	59	...	
159	Semā	26,400	32,922	
160	<i>Simi</i>	These two dialects are referred to in the Survey, but no separate figures for them were obtainable.
161	<i>Zhimoml</i>	
162	Rengmā or Unzā	5,500	4,389	
163	<i>Unzā</i>	2,750	...	
164	<i>Māyi</i>	2,750	...	
165	Kezhāmā	1,620	5,035	

Serial No.	Name of Language or Dialect.	NUMBER OF SPEAKERS.		REMARKS.
		Survey Estimates (1891).	According to Census, 1911.	
	<i>Central Nāgā Sub-Group</i>	38,000	48,827	In the Survey column, the number of speakers given for the Sub-Group does not agree with the total of the number of speakers given for each separate language. For languages spoken outside settled British Territory it was impossible even approximately to estimate the number of speakers. This fact has been allowed for in giving the figures for the Sub-Group, which should be considered as a very low estimate of the total number of speakers—probably too low.
166	Āo or Hatigorraia	15,500	29,068	
167	Chungli or Zungi	9,300	...	
168	Mongsen	6,200	...	
169	Lhōtā or Tsōntsi	22,000	19,627	
170	Tengsa Nāgā	?	...	
171	Thukumi	?	...	
172	Yachumi	?	132	These three languages are spoken beyond the frontier. See the preceding note. They are all briefly described in the Survey.
	<i>Eastern Nāgā Sub-Group</i>	10,000	2,940	In the Survey column, the number of speakers given for the Sub-Group does not agree with the total of the number of speakers given for each separate language. For languages spoken outside settled British Territory it was impossible even approximately to estimate the number of speakers. This fact has been allowed for in giving the figures for the Sub-Group.
173	Angwāuku or Tableng	5,000	299	
174	Tamlu or Chingmēgnu		1,998	
175	Banparā	1,600	...	
176	Mutoniā		...	
177	Mohongia, Borduaria or Pāniduaria		...	
178	Namsangia	1,870	...	
179	Chāng or Mojung	?	643	These four languages are all really trans-frontier forms of speech. See the preceding note. One estimate gives the number of speakers of Chāng as about 6,500, but its value is doubtful. All four are dealt with in the Survey.
180	Assiringia	?	...	
181	Mōshāng	?	...	
182	Shānggē	?	...

Serial No.	Name of Language or Dialect.	NUMBER OF SPEAKERS.		REMARKS.
		Survey Estimates (1891).	According to Census, 1911.	
814	Western Pahārī	853,468	1,452,494	No figures for these dialects were available in the Census of 1891. The term 'Western Pahārī' in that Census included many other dialects spoken far to the west. The Survey figures are therefore local estimates. The figures of the Census of 1911 are also excessive. The corrected total for the whole Panjab (902,866) is no doubt correct. But such figures as 640,245 from the Kashmir State clearly refer to some other language. In Kashmir, the total number of speakers of Western Pahārī, as defined in the Survey, cannot exceed 30,000. On the other hand, the numerous speakers of Jaunsārī in the United Provinces do not seem to have been returned at all. At the present day, it is probable that the correct total for Western Pahārī is about 960,000. From the Census figures 73,981 have been deducted, and transferred to Lahnda (No. 415). See Panjab Census Report, p. 361.
815	Jaunsārī	47,437	3,648
